

Sub Q1

(a) image pickup means for generating digital
e;

(c) transmitting means for executing wireless transmission of the digital image and list information recorded in the recording medium to an external apparatus,

2. An image communication apparatus according to claim 1, wherein:

3. An image communication apparatus according to claim 1, wherein:

the mode automatically executes wireless transmission of the digital image and list information

if said image pickup means is not in an image pickup state.

4. An image communication apparatus according to
5 claim 1, wherein:

said image communication apparatus skips reproduction of digital image recorded by the external apparatus.

10 5. An image communication apparatus according to
claim 1, wherein:

the image communication apparatus deletes digital image recorded by the external apparatus.

15 6. An image communication apparatus according to
claim 1, wherein:

said image communication apparatus controls the mode in accordance with a program stored in the recording medium.

7. An image communication apparatus according to claim 1, wherein:

the list information is generated for each of the digital image.

8. An image communication apparatus according to claim 1, wherein:

the list information includes any one of an image pickup date and time and a title.

5 9. An image communication apparatus according to claim 1, wherein:

the digital image includes any one of a moving image and a still image.

10 10. An image communication apparatus according to claim 1, wherein:

said transmitting means has a function of spread spectrum communication method.

15 11. An image communication apparatus according to claim 1, wherein:

said image communication apparatus is a camera integrated digital video recorder or a digital camera.

20 12. An image communication apparatus, comprising:

(a) receiving means for receiving list information supplied from an external apparatus through wireless transmission;

(b) recording means for recording the list information;

25 (c) comparing means for comparing the list information with other list information recorded by said recording means; and

000110-5552400

(d) control means for remotely controlling image information corresponding to the list information in accordance with a comparison result by said comparing means.

5

13. An image communication apparatus according to claim 12, wherein:

said image communication apparatus requests not to reproduce the image information corresponding to the list information, according to the comparison result by said comparing means.

10

14. An image communication apparatus according to claim 12, wherein:

said image communication apparatus requests to delete the image information corresponding to the list information, according to the comparison result by said comparing means.

15

15. An image communication apparatus according to claim 12, wherein:

20

the list information includes any one of an image pickup date and time and a title.

25

16. An image communication apparatus according to claim 12, wherein:

the image information includes any one of a moving

000110-6336400

17. An image communication apparatus according to claim 12, wherein:

18. An image communication apparatus according to claim 12, wherein:

19. An image communication method, comprising
steps of:

(b) recording the digital image and list information corresponding to the digital image, in a recording medium; and

25

(a) receiving list information supplied from an

external apparatus through wireless transmission;

(b) recording the list information;

(c) comparing the list information with other list information recorded at said recording step; and

5 (d) remotely controlling image information corresponding to the list information in accordance with a comparison result at said comparing step.

21. An image communication system, comprising:

10 (a) an image generating apparatus for recording digital image and list information corresponding to the digital image generated by an image pickup unit, in a first recording unit; and

15 (b) a recording apparatus for recording the digital image supplied from said image generating apparatus through wireless transmission, in a second recording medium,

wherein:

20 said image generating apparatus is provided with a first mode of automatically executing wireless transmission of the list information recorded in the first recording medium, according to a communication state with said recording apparatus; and

25 said recording apparatus is provided with a second mode of receiving the list information supplied from said image generating apparatus through wireless transmission and remotely controlling the digital image corresponding to the list information.
